JavaScript tomcat MSSQL PHP

PROJECTS

ONLINE MOVIE AND TV SERIES BROWSING SYSTEM

In the first semester of our second year, we created an object-oriented programming OOP Java web application that simulates an online browsing system for movies and TV series, utilizing HTML, CSS, JavaScript, PHP, and Java.

CAR RENTAL MOBILE APP AND FINANCE TRACKER APP

Developed mobile applications in Kotlin for 2nd Year 2nd Semester Mobile Application Development (MAD), including a Car Rental App for booking and managing vehicles, and a Finance Tracker App for tracking expenses and visualizing budgets.

SMART WASTE MANAGEMENT SYSTEM

Designed and implemented a Smart Waste Management System integrating IoT sensors with a web application to monitor, analyse, and optimize waste collection. The system tracked bin levels in real time, alerted authorities when bins were full, and suggested efficient collection routes, reducing overflow and improving sanitation. The project combined hardware (sensors, micro controllers) with a responsive front-end, back-end APIs, and data visualization dashboards.
